Rmd. TDF. xaringan presentations -- Chapter 7.

Xaringan Wiki

- slide layouts
- slide number
- footer and header

Remark.js

Remark.js Wiki

- Slide properties
 - class
 - background-image
 - template
 - layout
- CSS content classes
- Keyboard shortcuts
- Printing to PDF (print as PDF from Firefox/Chrome)

Themes

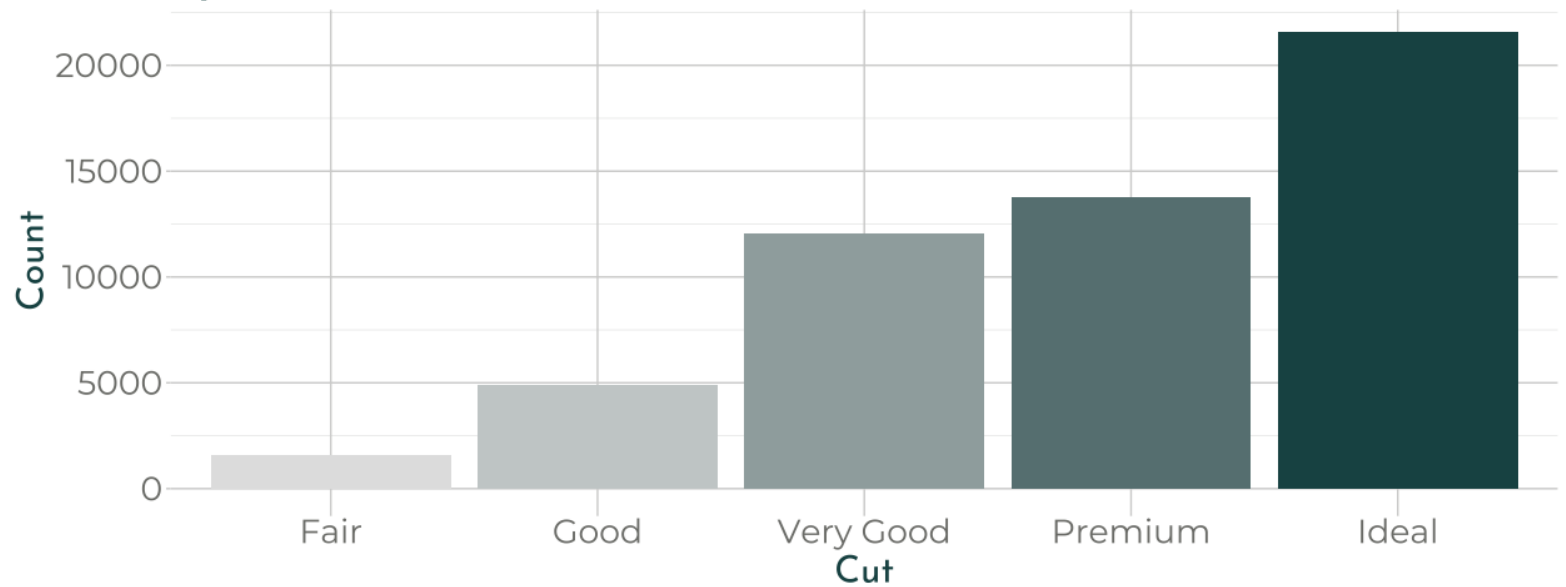

xaringanthemer with Duke colors

- Definitely read the *Quick Intro*

```
library(xaringanthemer)
style_duo_accent(
  primary_color = "#012169",      # Duke Navy Blue
  secondary_color = "#005587",    # Prussian Blue
  # style_mono_accent(
  # base_color = "#1c5253",
  header_font_google = google_font("Josefin Sans"),
  text_font_google = google_font("Montserrat", "300", "300i"),
  code_font_google = google_font("Fira Mono")
)
```

Also note the very cool **matching ggplot themes**

A Fancy diamonds Plot

Styling with Apron & Descartes

avoiding "raw" HTML

- Adirondak, and Descartes documentation
 - Slide layouts (Apron)
 - Image & element position / colors (Descartes) `descartes.less`

AND

- **Tachyons** -- classes to control formatting and CSS
 - See `XaringanExtra #tachyons`

In these cases you must be comfortable importing the appropriate CSS sheets and referencing them in the YAML header. Not hard, but beyond the focus of this workshop.

- `apron.css`
- `descartes.css`
- `tachyons.min.css`
